## Is Virtualization Right For You?

Virtualization is becoming increasingly popular due to the range of potential benefits it can offer, but is it something that your business should pursue? Experts predict that the network functions virtualization market alone will expand at a compound annual growth rate of 83.1 percent over the next five years, reaching a value of \$8.7 billion by the end of 2020. But while the market is growing, virtualization may still not be for every company out there. How can you determine if it's ideal for you?

There are currently several options when it comes to on-premises virtualization, including that related to storage, servers and desktop interfaces. Each of these strategies comes with its own set of advantages. However, virtualization might not be as beneficial for one type of company as it is for the next. What do you need to know to determine what's right for your business?

## Are You Getting The Most Out Of VDI?

Virtual desktop infrastructure has become increasingly common, but is it right for you? The technology can provide you with some distinct benefits, but if you're not thinking about how your infrastructure affects its performance, then an investment in VDI will not pan out for you.

In 2014, virtualization expert Brian Madden estimated that up to 25 million corporate desktop users relied on VDI and that this number could climb to more than 100 million in just a few years' time. There are many advantages to VDI for both administrators and end users. Let's explore the pros and cons and the importance of a resilient network to make it work.

### Take the Frustration Out of VDI

As more people want anywhere, anytime access to applications and information,

organizations are turning to virtual desktop infrastructure (VDI). But with VDI's many benefits come the challenges of a real-time, latency-sensitive application. Learn how your network can deliver a superior VDI experience to users.
